Pirelli Launches First Standard Production Tire Made with Over 70% Bio-Based and Recycled Materials Pirelli collaborated with Jaguar Land Rover (JLR) in 2021 to create the world's first tire made with FSC-certified natural rubber, marking a significant step towards sustainability in the automotive industry. This partnership is part of JLR's effort to increase the use of recycled and bio-based materials in its vehicles, further solidifying its commitment to reducing environmental impact. The new tire will serve as a testing ground for innovative materials, with the goal of increasing the proportion of components with low environmental impact over time. In 2024, JLR became the first car manufacturer to equip its vehicles with Pirelli tires containing 100% FSC-certified natural rubber, demonstrating its leadership in sustainable practices. The use of FSC-certified natural rubber in these tires underscores Pirelli's dedication to promoting responsible forest management and reducing the industry's ecological footprint.
